
Instructions: Print & cut the paper template along the dashed line (leave that line visible to aid aligning & centering on the 4x8" plastic sheet). This line is halfway between the edge of the plastic (the solid outer line) & the center of the drilled hole. The paper template will be taped down. Cutting as close as possible to the dashed line gives some space to tape. But, keep that line as a guide for squaring & centering the holes to the edges of the plastic.)

Printing: Printers often have a default "scale to fit" setting. Be sure the printer is set to 100%. Use a ruler to check the actual printed dimensions.

The .svg image of this template is drawn exactly to size. It may print ok. But, the .pdf version of this template should be the first choice (the pdf format is for "printable documents.").
